ORDINI

Gli ordini dovranno pervenirci per iscritto.

VENDITA MINIMA

Sulle fatture con importo inferiore a € 75,00 verranno addebitate € 10,00 per spese amministrative.

L'unità minima vendibile è indivisibile ed è simboleggiata con 

TRASPORTI

Porto FRANCO per ordini superiori a € 1.500,00. Per importi inferiori verrà addebitato il costo del trasporto

Per consegne in Sicilia e Sardegna le condizioni di trasporto dovranno essere concordate in fase di conferma d'ordine.

RESI DI MATERIALE

Non verranno accettati resi se non preventivamente concordati e autorizzati in forma scritta.

L'accettazione di un reso, che deve comunque essere fatta entro 8 giorni dalla data del ricevimento della merce, salvo nostro errore di consegna, prevede un addebito minimo del 10% del valore del materiale oggetto del reso e può avvenire solo al verificarsi delle seguenti condizioni: materiale non manomesso; indicazione sui documenti del reso del n° DDT e della fattura di acquisto del materiale; spese di trasporto a carico del cliente.

RESPONSABILITA'

La responsabilità civile sui materiali venduti da Basor Electric S.A., decade dopo un anno dalla data di consegna, sempre che gli stessi siano stati usati correttamente.

FORO COMPETENTE

Per ogni controversia è competente il foro di Parma.

Le informazioni contenute in questo listino sono a titolo informativo e non a titolo contrattuale.

VUOI VERNICIARE IL TUO PRODOTTO BASOR ?

Dobbiamo solo sapere:

- Colore RAL
- Quantità e referenza dei prodotti BASOR
- Tipo applicazione: 1 o 2 lati
- Tipo di finitura: GSE, GSP, o GCP

E vi faremo un preventivo senza impegno.

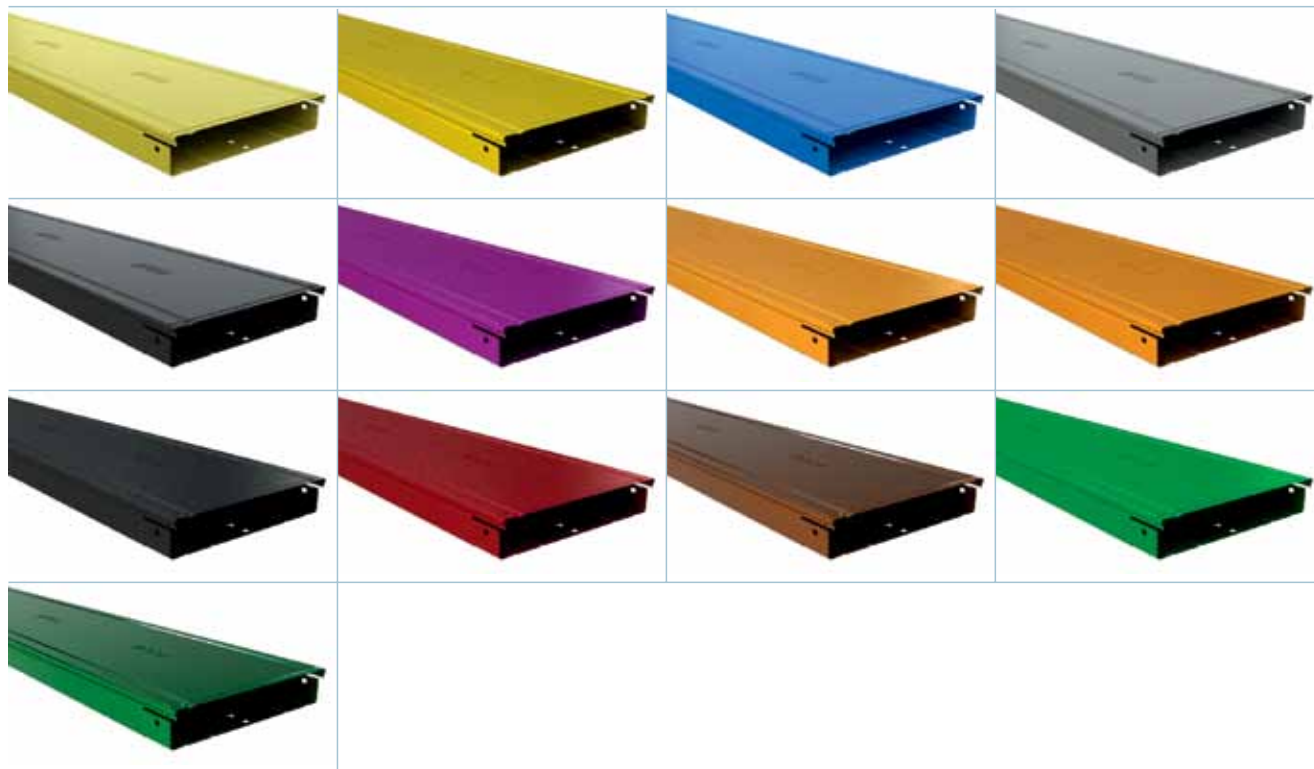

Acciaio Verniciato (GSE) Acciaio ricoperto con una resina ibrida epoxi-poliestere. L'acciaio si ricopre di resina in polvere e poi polimerizza ad una temperatura di 185-190°C per 15 minuti. Lo strato ottenuto è tra i 60 e 80 micron, e si caratterizza per una eccellente aderenza. Questo rivestimento si applica sopra l'acciaio galvanizzato sendzimir o sopra l'acciaio normale. In quest'ultimo caso, prima dell'applicazione elettrostatica della resina si procede allo sgrassaggio dei pezzi e ad una fosfatazione amorfa per asperione in tunnel di trattamento, che migliora la protezione contro la corrosione del materiale normale. L'acciaio verniciato viene impiegato in ambiente umido, chimico e urbano, sempre che l'aspetto esteriore sia importante.

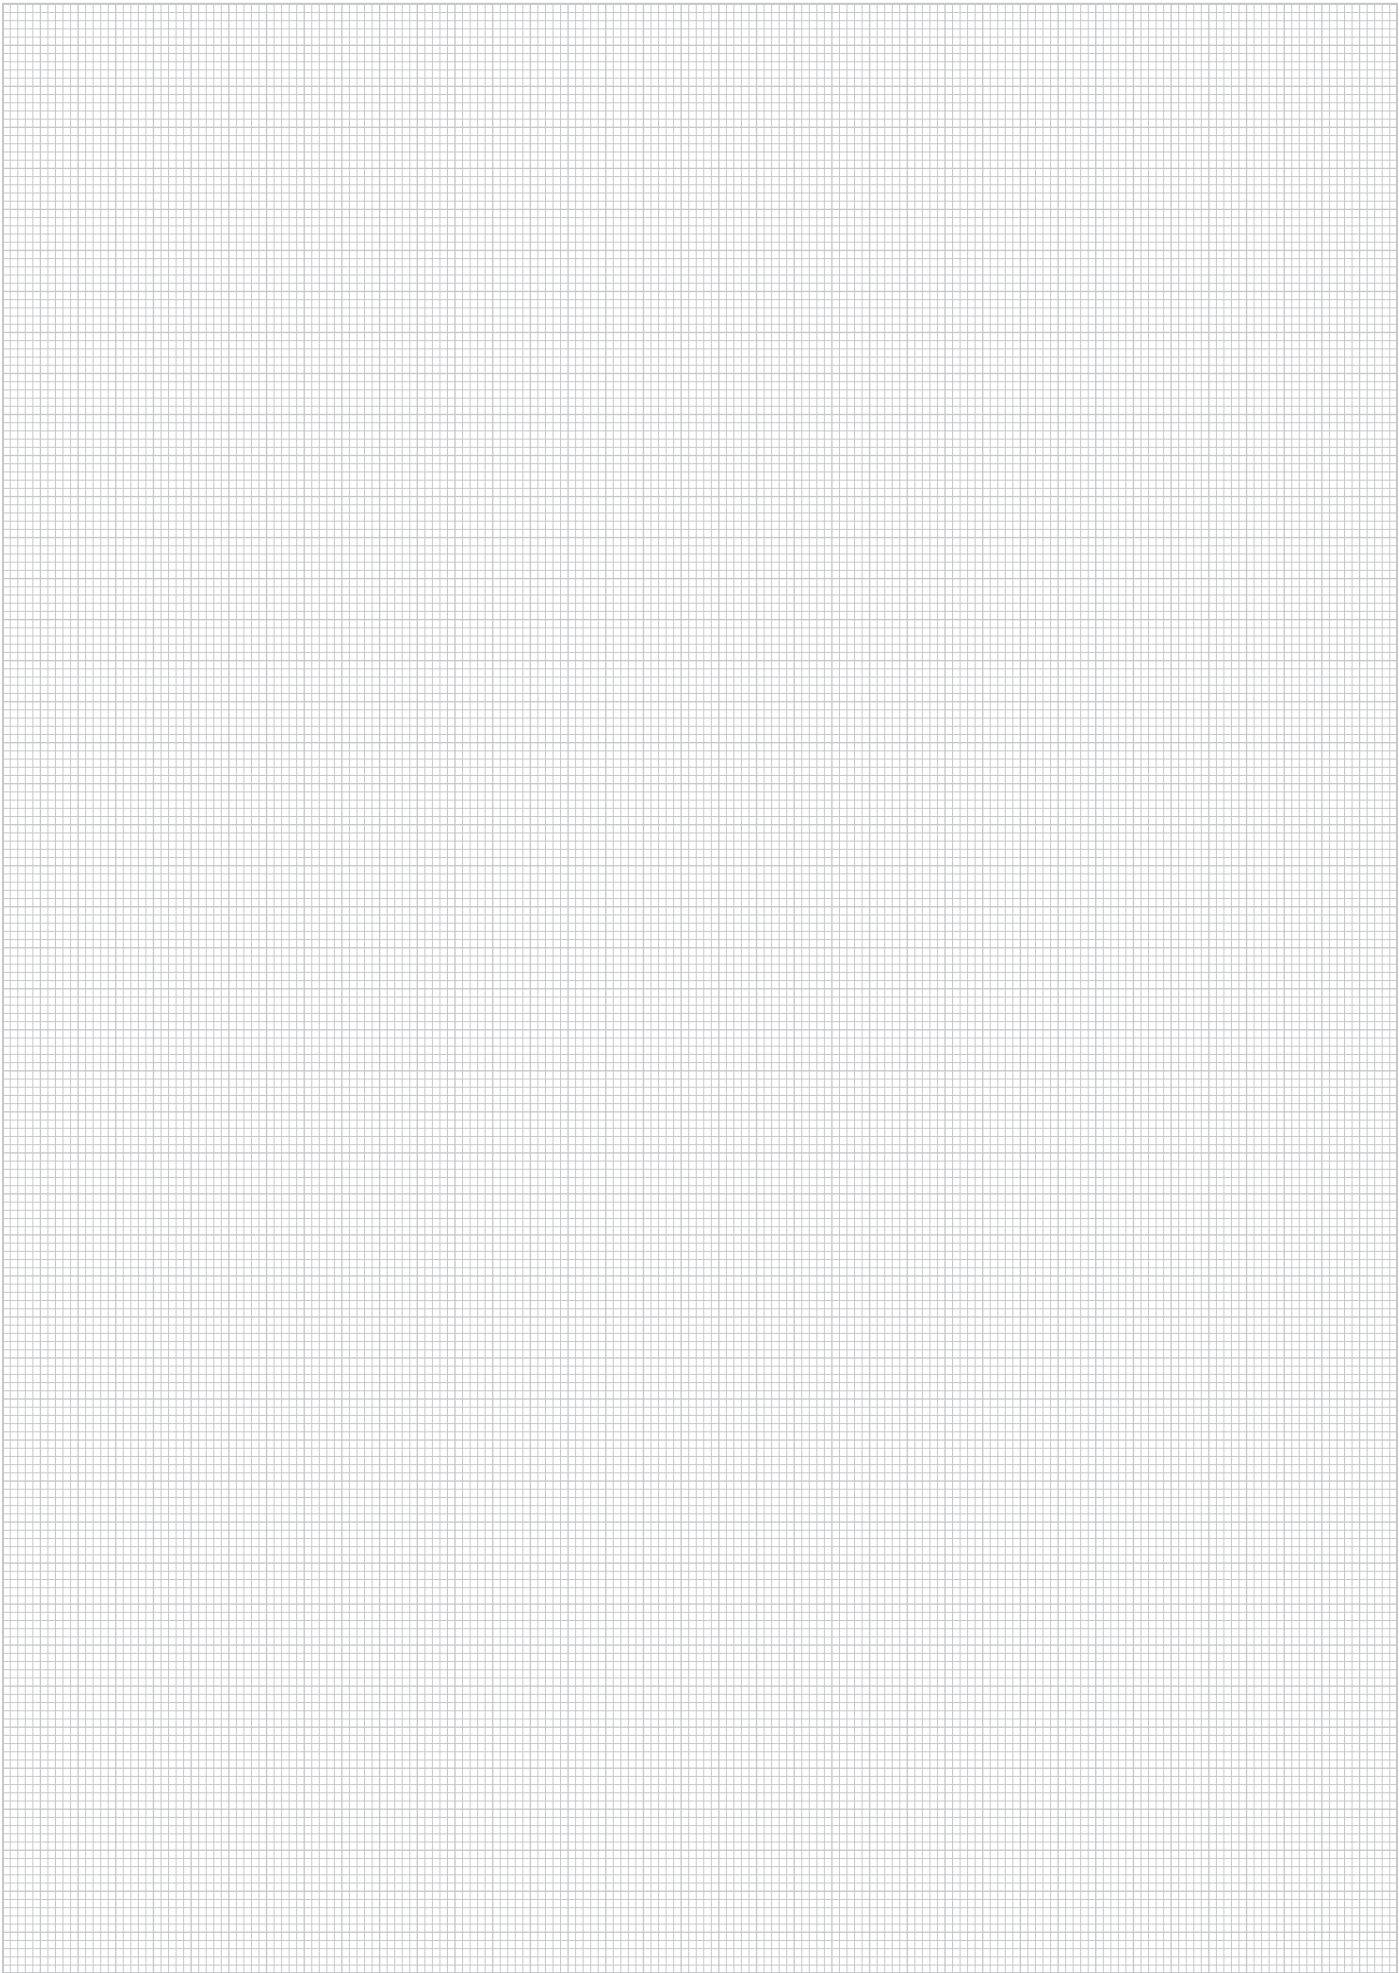

Acciaio Verniciato con Poliestere (GSP) Acciaio ricoperto con una resina in poliestere. L'acciaio si ricopre di una resina in poliestere in polvere poi si fa una polimerizzazione a una temperatura di 190-195 °C per 15 minuti. Lo strato ottenuto è tra i 60 e 80 micron, e si caratterizza per una eccellente aderenza. Questo rivestimento si applica sopra l'acciaio galvanizzato sendzimir o sopra l'acciaio normale. In quest'ultimo caso, prima dell'applicazione elettrostatica della resina si procede allo sgrassaggio dei pezzi e ad una fosfatazione amorfa per asperione in tunnel di trattamento, che migliora la protezione contro la corrosione del materiale normale. L'acciaio verniciato con resina in poliestere è resistente ai raggi ultravioletti, si usa in atmosfera umida, sia all'interno che all'esterno, ambienti chimici aggressivi e ambienti salini. Il sistema GSP di BASOR, con il suo rivestimento, supera ampiamente la classe 8 della normativa UNE-EN IEC 61537.

Acciaio Duplex (GCP) Acciaio galvanizzato a caldo secondo la normativa UNE-EN ISO 1461 con un successivo rivestimento di resina in poliestere. Questo strato con la sua resistenza meccanica e buona resistenza chimica migliora la resistenza alla corrosione dello strato iniziale galvanizzato a caldo. Lo spessore totale dei due strati di questo sistema di protezione ha uno spessore di circa 160µm.

Un rivestimento di GC di 85µm si considera classe 8 secondo la normativa UNE-EN IEC 61537 e supera le 850 ore di test in nebbia salina neutra (ISO 9227). Il sistema GCP di BASOR con il suo doppio rivestimento migliora notevolmente la classe 8.

Inoltre questa finitura è adatta per atmosfere aggressive C4, C5-I e C5-M (normativa UNE-EN ISO 12.944-5).
